

Course analysis for Astronomins grunder, ASTA03, HT 2021

Course responsible: Nils Ryde

Other teachers: Peter Linde, Anna Arnadottir

Number of students registered: 64

Course representative: Susanne Tegler, su0536te-s@lu.se

Grades: U - n, G - 11, VG – 16, G men med rest - 6

Analysis

I. **Summary of the course evaluations**

Total number of responses: 9

Short summary of the results: Overall the students were satisfied with the course (grade 4.1). Especially the students appreciated the content and that the lectures were recorded, but they would have liked more interaction over the zoom media and observations IRL. Some students wanted lectures IRL which would help interaction during the lectures.

II. **Comments and reflections from the teachers**

The teachers felt that the course went well. It was a pity we could not meet at any instance at all.

III. **Evaluation of changes since last time the course was given**

Since last time the course was given we have changed to on-line only and this was perceived by the students as necessary for this course with students from all over the country.

IV. **Suggestions for modifications and measures until the next time the course is given**

Until the next time the course is given more interaction over zoom have to be prepared to give more life to the learning situation. Lecturing in Lund would not be possible for this course since it is intended for students from all over the country. One way could be to try hybrid lecturing. The student liked the essays so more of that could be introduced. Try to have observations IRL. Try to get more students to answer the course evaluation.

2022-03-02, this course analysis has been put together by Nils Ryde
